

**Minimum Feeding Requirements for Kittens
Based on Weight
(5g food per 100g body weight/1g per 20g body weight)**

Weight of Kitten Before Feeding	Weight of Kitten After Feeding	Amount of Food Consumed	WEIGH → FEED → WEIGH!
60 grams	63 grams	3	
80 grams	84 grams	4	
100 grams	105 grams	5	→ Feed bottle babies as much as they will take on their own from the bottle; syringe feed when they do not eat enough on their own.
120 grams	126 grams	6	
140 grams	147 grams	7	
160 grams	168 grams	8	
180 grams	189 grams	9	
200 grams	210 grams	10	
220 grams	231 grams	11	→ When bottle babies have been syringe fed previously, try to bottle feed them first, then syringe feed if they won't eat from the bottle.
240 grams	252 grams	12	
260 grams	273 grams	13	
280 grams	294 grams	14	
300 grams	315 grams	15	
320 grams	336 grams	16	
340 grams	357 grams	17	→ When gruel kittens have been syringe fed previously, see if they will eat on their own in a bin. If not, then syringe feed them. Be sure to chart their weights accurately.
360 grams	378 grams	18	
380 grams	389 grams	19	
400 grams	420 grams	20	
420 grams	441 grams	21	
440 grams	462 grams	22	
460 grams	483 grams	23	
480 grams	504 grams	24	→ If gruel kittens lose weight from previous feedings but have been eating on their own, syringe feed the required amount. Be sure to accurately record beginning and ending weights.
500 grams	525 grams	25	
520 grams	546 grams	26	
540 grams	567 grams	27	
560 grams	588 grams	28	
580 grams	609 grams	29	
600 grams	630 grams	30	
620 grams	651 grams	31	
640 grams	672 grams	32	
660 grams	693 grams	33	→ If the kitten eats on its own in a bin, be sure to record the beginning and ending weights accurately.
680 grams	714 grams	34	
700 grams	735 grams	35	
720 grams	756 grams	36	
740 grams	777 grams	37	
760 grams	798 grams	38	
780 grams	819 grams	39	
800 grams	840 grams	40	WEIGH → FEED → WEIGH!
